I believe this settlement is a fair and reasonable compromise. This antitrust case needs to end now. I also believe that our economy is in the shape that is in now because of this case. If we don't settle this case now our economy is going to get worse because the market does not like any kind of uncertainty. I also believe that Microsoft did not really do anything wrong. It's being punished for being a really good company and having good products. This antitrust case was not about protecting the consumers as it should have been. It was all about protecting Microsoft's competitors! This is not what our government should be doing!
